

When does waiting for a certificate change verdict errors?

JudgmentBench / GPT-5.4 • same 1,539 annotations, changed scoring target • release task order

Each point pairs the same queried criteria. Means over seeds 1-31; shaded percentiles are order variation, not confidence intervals.

Negative net: fewer errors with gating. Positive net: more errors with gating. FP + FF = net for means; quantiles do not add.

Budget is an available criterion-query cap; early stopping can leave it unused. Auxiliary judge inference is a separate cost. Fixed released references.
